

You Hold The Key!

Eurasian milfoil is an invasive aquatic plant that has spread to lakes throughout the province of Quebec. Milfoil normally grows along the shoreline at a depth of 1-3 metres, prefers phosphorous-rich waters, and reproduces through fragmentation - which occurs when it is disturbed/chopped by **boat propellers and turbines.**

1. Learn to recognize it.
2. Avoid infested areas.
3. Raise your motor and paddle/row your way through infested areas.

If you do come across this aquatic plant on Quinn Lake, Please immediately advise the association
